PROFESSIONAL SUMMARY

Technical game designer and CMU graduate student with 8 years of experience across independent, academic, and commercial games. Specializes in Unity/C#, gameplay prototyping, systems design, and UI/UX design and implementation.

Education

Carnegie Mellon University — Pittsburgh, PA
Master of Entertainment Technology — Expected May 2027

National Tsing Hua University — Hsinchu, Taiwan
Bachelor of Science in Computer Science — Jun 2024

Experience

CreSpirit — Hsinchu, Taiwan
CreSpiritTalker - **UI/UX Tool Programmer (Contract)** — Nov 2024 - Jun 2025

- Developed a commissioned Unity/C# editor with ScriptableObject dialogue databases reusable across visual novel scenes.
- Enabled dialogue effects, object control, and branching conversations through custom commands with async/await support.
- Created reusable UI templates, Google Sheets-to-JSON dialogue imports, and per-language fonts for localized visual novels.

Last Command: B-Side (Released DLC) - **Technical Game Designer Intern** — Feb 2024 - Jun 2024

- Designed and implemented a shape-fitting puzzle minigame to provide relaxed pacing between boss encounters.
- Built a Unity Inspector level editor that lets designers configure puzzle layouts and available blocks without editing code.
- Refined block selection, rotation, placement, and board/inventory navigation through playtesting and UI reference analysis.

Selected Projects

What Does This Sound Like? - **Technical Game Designer** — Aug 2026 - Present

- Originated a Foley-inspired exploration and puzzle game concept, contributing mechanics and level design on a 7-person team.
- Built a readable, extensible prefab-based level system for configuring interactions, colliders, sounds, and event sequences.
- Automated FMOD event assignment by object/action names and linked gameplay states to interaction and animation controls.

You Hive My Word - **Technical Game Designer (Solo Project)** — Jun 2025 - Present

- Designed and built a word-production game with progression and upgrade systems as a solo developer.
- Combined spreadsheet-driven balancing with player-progress logging to tune progression and review playtest results.
- Simplified progression and redesigned visual feedback after playtests exposed difficulty understanding the core loop.

Project Fusion - **Technical Game Designer** — Apr 2023 - May 2024

- Implemented artifact fusion mechanics that grant party members combat abilities in a turn-based boss-rush prototype in Unity.
- Adapted Unreal's Gameplay Ability System concepts into Unity for an auto-battler rework, using modular abilities and effects.
- Designed and programmed animated combat UI showing turn order, available actions, and target information.

Survivor For the Feast - **Technical Game Designer** — Sep 2022 - Jan 2023

- Connected combat, ingredient gathering, and cooking in a core loop featuring 144 dishes that grant skills and stack their effects.
- Balanced ingredients, recipes, enemies, skills, and weather across 6 biomes in a survivor-like game with 3 playable job classes.
- Led a 5-person team, managing milestones and task assignments while programming the gameplay UI.

Skills

Programming & Tools: C#, C++, Python, C, Unity, Godot, FMOD, UniTask, Git, Perforce, Google Sheets, Notion
Implementation: Unity Editor scripting, UI programming, data-driven gameplay, gameplay state systems, playtest logging
Design: Gameplay prototyping, systems and combat design, UI/UX, level-authoring tools, spreadsheet balancing, playtesting
